Craters on the Moon

Science Experiment

Method

- 1. Mix the cornflour and baby oil in the box. Then smooth it out to make a level surface.
- 2. Show the children the pictures of the moon. Can they see all the dark craters? Explain that they are made when rocks crash into the moon.
- 3. Explain to the children that they will be making their own craters. Ask the children to stand by the box and drop the pebbles, one by one, into the flour.
- 4. Observe what happens to the flour and the holes that are made.
- Allow the children to experiment with different sizes of pebble and different heights of drop.

You will need:

8 cups cornflour

1 cup baby oil

Plastic box

Pebbles and stones
